In 1150 AD, Bhaskaracarya (b. 1114 AD), renowned mathematician and astronomer of Vedic tradition composed Lilavati as the first part of his larger work called Siddhanta Siromani, a comprehensive exposition of arithmetic, algebra, geometry, mensuration, number theory and related topics. Lilavati has been used as a standard textbook for about 800 years. This lucid, scholarly and literary presentation has been translated into several languages of the world. Bhaskaracarya himself never gave any derivations of his formulae. N.H. Phadke (1902-1973) worked hard to construct proofs of several mathematical methods and formulae given in original Lilavati. The present work is an enlargement of his Marathi work and attempts a thorough mathematical explanation of definitions, formulae, short cuts and methodology as intended by Bhaskara. Stitches are followed by literal translations so that the reader can enjoy and appreciate the beauty of accurate and musical presentation in Lilavati. The book is useful to school going children, sophomores, teachers, scholars, historians and those working for cause of mathematics.

"Large-scale mass gatherings, such as the Olympic Games, represent significant challenges for the entire health sector of host countries. Emerging global public health threats of natural or deliberate nature increase considerably the health and safety vulnerability of mass gatherings. Major areas of public health responsibility include health care capacity and mass-casualty preparedness; disease surveillance and outbreak response; environmental health and food safety; public information and health promotion; public health preparedness and response to incidents potentially involving the deliberate use of explosives, biological and chemical agents or radionuclear material; and leadership, operations and unified command. This book comprehensively and systematically presents the experience of and lessons learned from the public health aspects of the preparations and conduct of the Athens 2004 Olympic Games. Documenting this experience can be a source of valuable information and knowledge for governments at all levels and communities in building their capacity for not only large-scale events but also preparing to deal with the avian influenza pandemic threat or other emergencies such as flooding and phenomena often associated with climate change." - t.p. verso.

"The purpose of this publication is to contribute to [the] process of clarification by explaining universally recognised human rights in a way that makes sense to business. The publication also aims to illustrate, through the use of case studies and actions, how human rights are relevant in a corporate context and how human rights issues can be managed."--Introduction, p. vii.

It seems almost daily we read newspaper articles and watch news reports exposing the growing epidemic of obesity in America. Our government tells us we are experiencing a major health crisis, with sixty percent of Americans classified as overweight, and one in four as obese. But how valid are these claims? In *Fat Politics*, J. Eric Oliver shows how a handful of doctors, government bureaucrats, and health researchers, with financial backing from the drug and weight-loss industries, have campaigned to create standards that mislead the public. They mislabel more than sixty million Americans as "overweight," inflate the health risks of being fat, and promote the idea that obesity is a killer disease. In reviewing the scientific evidence, Oliver shows there is little proof that obesity causes so much disease and death or that losing weight is what makes people healthier. Our concern with obesity, he writes, is fueled more by social prejudice, bureaucratic politics, and industry profit than by scientific fact. Misinformation pushes millions of Americans towards dangerous surgeries, crash diets, and harmful diet drugs, while we ignore other, more real health problems. Oliver goes on to examine why it is that Americans despise fatness and explores why, despite this revulsion, we continue to gain weight. *Fat Politics* will topple your most basic assumptions about obesity and health. It is essential reading for anyone with a stake in the nation's--or their own--good health.

These guidelines make recommendations regarding the management of individuals with a body mass index greater than 25.0 kg/m² and cover all age groups, from children to the elderly, as well as various patient subsets. A range of measures to yield health benefits are set out, including healthy eating plans, increased physical activity, and behavioral modifications to help patients to manage obesity. In addition, recommendations are made on the use of bariatric surgery and the new antiobesity drugs. Throughout the process of developing the recommendations, every attempt was made to ensure use of a rigorous, evidence-based approach. The guidelines are promoted by the Italian Society of Obesity (SIO) and were formulated in compliance with a prespecified process overseen by a steering committee. They are intended for use by a wide range of clinicians, including general practitioners, primary health care nurses, and primary health care professionals, and will hopefully prove of value in combating the obesity epidemic not only in Italy but across Europe and elsewhere in the world.
