Multilevel Governance - Gary Marks

Multi-level governance is defined as the vertical (multiple levels) and horizontal (multiple actors) dispersion of central government authority (Bache/Flinders 2004) and refers to both, political structures and decision making processes (Sch\u00e4fer 2010). While governance refers to the “growing interdependence between governments and non-governmental actors at various territorial levels” (Bache/Flinders 2004, 3) the concept of multi-level governance adds the dimension of scale.

Despite the different concerns of different authors, four common strands emerge that provide a parsimonious definition of multi-level governance that raises clear hypotheses for future research. First, that decision-making at various territorial levels is characterized by the increased participation of non-state actors.

Multi-level Governance - Oxford Scholarship

Multi-level (or multilevel) governance is an approach in political science and public administration theory that originated from studies on European integration. The concept of multi-level governance was developed in the early 1990s. The theory resulted from the study of the new structures that were put in place by the EU (Maastricht Treaty) in 1992.

Abstract. The expansion of European foreign and security policy co-operation since the 1970s imposes unique requirements on European Union (EU) member states, and the co- ordination of these various obligations presents a major challenge to the EU's pursuit of a common foreign and security policy (CFSP). However, the past decade has also seen significant progress toward the multi-level governance of EU foreign policy, particularly when compared to the limited policy co-ordination of the ...

Important policy problems rarely fit neatly within existing territorial boundaries. More difficult still, individual governments or government departments rarely enjoy the power, resources and governance structures required to respond effectively to policy challenges under their responsibility. These dilemmas impose the requirement to work with others from the public, private, non-governmental organisation (NGO) or community spheres, and across a range of administrative levels and sectors. But how? This book investigates the challenges—both conceptual and practical—of multi-level governance processes. It draws on a range of cases from Australian public policy, with comparisons to multi-level governance systems abroad, to understand factors behind the effective coordination and management of multi-level governance processes in different policy areas over the short and longer term. Issues such as accountability, politics and cultures of governance are investigated through policy areas including social, environmental and spatial planning policy. The authors of the volume are a range of academics and past public servants from different jurisdictions, which allows previously hidden stories and processes of multi-level governance in Australia across different periods of government to be revealed and analysed for the first time.

European politics has been reshaped in recent decades by a dual process of centralization and decentralization. At the same time that authority in many policy areas has shifted to the supranational level of the European Union, so national governments have given subnational regions within countries more say over the lives of their citizens. At the forefront of scholars who characterize this dual process as Omulti-level governance,OLiesbet Hooghe and Gary Marks argue that its emergence in the second half of the twentieth century is a watershed in the political development of Europe. Hooghe and Marks explain why multi-level governance has taken place and how it shapes conflict in national and European political arenas. Drawing on a rich body of original research, the book is at the same time written in a clear and accessible style for undergraduates and non-experts.

'The editors have produced an authoritative and comprehensive guide to multi-level governance. the book ranges across the domestic context, supraregionalism and global governance - all filtered through a sophisticated analytical framework and attention to policy detail. There is no better place to go than this book for a guide to the topic. An outstanding accomplishment.' - David Held, London School of Economics, UK

This book examines the governance arrangements in Northern Ireland through a multi-level lens, particularly in the period since the new institutions established through the 1998 Agreement became more firmly embedded.

This volume argues that progress in both the study and the practice of Multi-Level Governance may derive from developing linkages with disciplines, perspectives and issues that have so far not been explored in connection to MLG.

How can one convince potent nation-states to put their sovereignty at risk in common European policies? EU cohesion policy, now one-third of the EU budget, provides such a puzzle. Until 1988 the European Commission shared out money to national governments with few strings attached. Since the reform of 1988, national governments are required to negotiate with the Commission and regional authorities on how to use the money. Has this European-wide policy eroded national sovereignty in favour of a stronger role for the Commission and more power for Europe's regions? The first part of the book probes into the policy dynamics at the European level. In the second part, eight country studies evaluate the impact of uniform EU policy on territorial relations by comparing policy making before and after the reform. The concluding section explains persistent variation in EU cohesion decision making and implementation.
